

United Technologies

United Technologies is a major contractor for the US military, specializing in high tech products. In addition to building missile systems and helicopters for the military, United Technologies also manufactures a variety of high tech products for civilian use including elevators and escalators, helicopters, building security systems, and aircraft engines.

United Technologies traces its history back to a 1929 merger between several companies including Boeing, Sikorski, and Pratt & Whitney. The Air Mail Act of 1934 forced the company to break into 3 parts, one of which was United Aircraft. The company kept the United Aircraft name until becoming United Technologies in 1975. This was followed by the acquisition of several companies involved in a variety of technologies including Otis Elevator and Chubb Security. Today the company continues to operate several subsidiaries including Sikorsky Aircraft. If you have a passion for high tech design, engineering, manufacturing or sales, then United Technologies is an excellent place to begin a job search.

United Technologies takes an active role in the political process, and was the 6th largest defense industry donor during the 2004 election cycle. It was also one of only 53 companies to contribute the legal maximum to the 2nd inauguration of President George W. Bush. Unsurprisingly, UT donates substantially more to Republican candidates, both on the national and state level.

As a military contractor, UT also employs people in a variety of fields including compliance officers, along with a variety of positions involved in policy shaping and analysis. Other job tracks include manufacturing, public relations, logistics, and information technology. All told, United Technologies employs a little over 200,000 people. Both full time and part time employees receive a comprehensive benefits package, including health care plans, flex time options, paid time off, and educational assistance plans.

Currently on Hound, there are 400 job listings with United Technologies, ranging from tax accountant to manufacturing engineer. Because Hound doesn't charge employers to list **open positions** we can bring you every possible job opening. Compare this to job sites that charge employers stiff fees to list open positions - currently on monster.com there are 12 open positions listed. Whether you are looking for a job in high tech or some other field, no other site can match the sheer number or breadth of job listings that you will find at Hound!
